Summer Test 4

Questions, Answers and Topic Information

Read the following instructions or press ‘play’ ▶ and listen to the instructions being read from the CD-ROM.

Listen carefully to the instructions I am going to give you. When I have finished reading them, I will answer any questions. You will not be able to ask any questions once the test has begun.

I am going to ask you 20 questions. On your sheet there is an answer box for each question, where you should write the answer to the question and nothing else. You should mark out the answer to each question in your head, but you may jot things down outside the answer box if this helps you. Do not try to write down your working because this will waste time and you may miss the next question. For some of the questions, important information is already written down for you on the answer sheet.

I will read each question twice. Listen carefully both times. You will then have time to work out your answer. If you cannot work out an answer, put a cross in the answer box. If you make a mistake, cross out the wrong answer and write the correct one next to it. There are some easy and some harder questions, so do not be put off if you cannot answer a question.

Now pause, or press ‘pause’ II on your CD player or computer. Ask the children if they have any questions. Once you have answered all the questions, read out the following instructions. Alternatively, play the audio recording from the CD-ROM.

Now we are ready to start the test.

For this group of questions you will have 5 seconds to work out each answer and write it down.

1 Double ninety-three.
2 What is two-thirds of thirty-six?
3 Write the number seventy-two thousand and three in digits.
4 How many eighths are there in four?
5 What is one-quarter of a litre in millilitres?

For this group of questions you will have 10 seconds to work out each answer and write it down.

6 Look at your answer sheet. What is the cost for two adults and two children?
7 Calculate the difference between ten point nine and three point five.
8 What is the total of two thousand nine hundred and ninety-two and three thousand nine?
9 Look at your answer sheet. Tick the obtuse angle.
10 What number multiplied by ten gives an answer of fifty-three?
11 What must be added to two-sevenths to make a whole one?
12 Write fifty-four millimetres as centimetres, using a decimal number.
13 Add fifteen to the difference between thirty-two and twenty.
14 Look at your answer sheet. What type of angles are shown?
15 Look at your answer sheet. What percentage of the shape is shaded?

For this group of questions you will have 15 seconds to work out each answer and write it down.

16 Write ten to ten in the evening as it would appear on a twenty-four-hour digital clock.
17 A bus takes fifty-three minutes to get from Macclesfield to Weston. If Jess has been on the bus for nineteen minutes, how many more minutes is it until she reaches Weston?
18 Look at your answer sheet. Write the next number in the sequence.
19 Add together three hundred and two, twenty-six and seventy.
20 If fifty per cent of some sweets are green and there are thirty-five sweets that are not green, how many sweets are there altogether?

Now put down your pen or pencil. The test is finished.

Total marks /20

How well did you do?

Colour the numbers of the questions you got right. Some questions may appear more than once.
